2. Citations and explanations (Rule 70.7)

The prior art does disclose the compounds equol and dehydroequol and their use in therapeutic applications.

The prior art is however limited to discussing short-term effects of UV exposure such as the protection against immunosuppression which is caused by such exposure.

In contrast, the present claims define the use of equol and dehydroequol in the context of longer-term outcomes of UV-exposure, namely, photoaging and actinic damage (as defined in the application). These applications are not disclosed or suggested by the prior art and are thus considered to be both novel and inventive.

The industrial applicability of the claims is not in doubt.
